BLÜCHER Drains Attain NSF Food Safety Certification

Spindale, NC – September 6, 2017 – BLÜCHER is pleased to announce that BLÜCHER stainless steel drains are now certified to NSF/ANSI/3-A Standard 14159-1 - Hygiene Requirements for the Design of Meat and Poultry Processing Equipment.

That standard applies to equipment intended for use in the slaughter, processing, and packaging of meat and poultry products, excluding hand-held tools and mechanical belt conveyors.

BLÜCHER products that meet the standard include stainless steel cleanouts, floor drains, kitchen channels, washroom/shower drains, trench drains, and round drains.

The company's HygienicPro® drains and channels are specifically designed to promote sanitary conditions that inhibit bacterial growth and ease drainage system maintenance. They exhibit exceptional cleaning properties, with design and construction that allow them to be thoroughly cleaned with minimal water and little production downtime. The BHG Series sloped channel, with its very high flow capacity, not only promotes self-cleaning but also eases routine cleaning. Used with BLÜCHER Pipe, HygienicPro drains and channels provide a complete hygienic solution for food and beverage processing facilities.
