

## Velec Systems North American Division

Velec Systems is a French based manufacturer for High-Speed Counting, Loading and Packaging Solutions with its subsidiary Multi-Fill Inc. based in Lake City, UT 84081. Specialized in the engineering and manufacturing of complete lines for the food processing industry, Velec Systems develops complete turnkey solutions, from sorting and handling of bare food products before and after processing to primary and secondary packaging, as well as all types of palletizing solutions.

Velec Systems provides simple and hygienic solutions designed completely in stainless steel and food grade materials aiming to increase throughput and overall Equipment Efficiency of the production line. Focus was set on significantly improving cleaning procedures and maintenance, resulting in a high degree of flexibility when changing over.

Velec`s most recent innovations include a CIP (clean in place) feature, optical control system, as well as IP69K wash down robotics.

Established in the 1960s, Velec Systems brings more than six decades of successful innovation to the market. The company is active primarily within the food processing industry and has successfully installed numerous installations worldwide with small-, medium-sized companies, as well as big international corporations.
