GTF Technologies, Ada, MI

ADA, MI - August 21, 2025 – GTF Technologies, an innovator in food stabilization solutions, will exhibit and present at the upcoming Equipment Automation and Technology Show (EATS), held October 28-30, 2025 in Chicago's McCormick Center.

Visitors can find GTF at Booth #1440 where the company will feature its RENU System, a patented technology that integrates drying and milling functions in a single, almost instantaneous process. By dramatically reducing drying time and labor, the RENU™ System enables more efficient, cost-effective powder production for food processors and ingredient manufacturers.

As part of the show's educational programming, GTF Founder and President Gary Schuler will present "Creating Revenue Streams from Waste Streams" on Wednesday, October 29, 2:30-3:00pm in Theater 1. His session will explore how food processing side streams and byproducts can be transformed into high-value powders for the ingredient and sustainable packaging market.

"EATS is a new show for us, and we're excited to be part of it," said Schuler. "It's a great chance to connect with customers and to demonstrate how the RENU System can help processors and juicers improve productivity and profitability."

For more information on GTF Technologies and the RENU System, check out GTF Technologies (gtf-technologies.com).
