

BESTMIX Software to Showcase Advanced Formulation Solutions at EATS 2025 in Chicago

Leading nutrition software provider demonstrates how integrated platforms solve critical challenges in food, pet food, and meat production

MALDEGEM, Belgium – Oct 2025 – BESTMIX Software, a global leader in formulation and recipe management software for the nutrition industry, announces its participation at EATS 2025 (The Equipment, Automation, and Technology Show for Food & Beverage), taking place October 28-30, 2025, at McCormick Place in Chicago, Illinois.

Visitors can experience live demonstrations of BESTMIX's integrated software solutions at Booth 3908, where the company will showcase how advanced formulation technology addresses the industry's most pressing operational challenges.

Solving Tomorrow's Food Challenges Today

"The pet food, food and meat industry is facing unprecedented complexity," said Bea Van Deynse, Marketing Manager of BESTMIX Software. "Regulatory requirements change constantly, supply chains are increasingly volatile, and consumer demands for transparency and quality continue to rise. BESTMIX provides the integrated platform that connects formulation, quality control, compliance, and production—transforming what used to take days into seconds."

With over 50 years of experience serving more than 10,000 users across 60 countries, BESTMIX has established itself as the trusted solution for manufacturers in animal feed, pet food, meat processing, dairy, bakery, confectionery, and prepared foods.

Live Demonstrations at Booth 3908

At EATS 2025, BESTMIX will demonstrate how its software platform addresses critical industry bottlenecks:

Regulatory Compliance Made Automatic

BESTMIX automatically adapts formulations to changing regulations, tariffs, and compliance requirements across any market with real-time regulatory intelligence. Whether it's FDA approvals, FSMA compliance, USDA standards, AAFCO's Pet Food Label Modernization, or global PFLM standards, the system keeps manufacturers proactive without endless manual rework, ensuring labels meet every requirement automatically.

Rapid Innovation Testing

Testing ingredient swaps, new blends, and functional additions happens instantly, showing how changes affect nutrition, cost, and quality before committing resources. The platform transforms NIR lab data into instant formulation insights—real-time quality data flows directly into recipes, turning hours of manual work into seconds of automated precision.

One Platform Instead of Disconnected Systems

BESTMIX offers one unified platform that connects formulation, costing, compliance, ERP, and production—eliminating the manual work and disconnected spreadsheets that lead to errors, rework, and worst-case scenario recalls that damage consumer trust.

Supply Chain Disruption Management

The software provides pre-validated backup formulations for every ingredient, enabling manufacturers to deploy tested alternatives immediately when disruptions hit, without compromising quality or stopping production. Live ingredient pricing integrated from ERP systems provides real-time decision support.

Quality vs. Speed Solved

BESTMIX cuts development time in half with predictive formulation technology, enabling faster product launches and personalized options while maintaining consistent quality standards across all batches.

AI-Driven Optimization

The platform incorporates AI-based predictive models for moisture management and quality control, enabling proactive adjustments during production rather than reactive corrections.

Booth: 3908

Dates: October 28-30, 2025
