

## FOR IMMEDIATE RELEASE

### **FoodSafe Drains (EATS Booth #2148) Introduces New Circular Catch Basin for 10,000 Series FoodSafe Slot Drain**

#### *Innovative Design Enhances Hygiene and Efficiency in Food and Beverage Facilities*

June 17, 2025 - FoodSafe Drains is a leader in the manufacturing of high-quality drainage systems, is pleased to announce the launch of its new Circular Catch Basin for the [10,000 Series FoodSafe Slot Drain](#). Designed specifically for the food and beverage industries, this innovative addition to FoodSafe product line offers enhanced cleaning efficiency and superior water flow, catering to the stringent hygiene requirements of food production facilities.

The new Circular Catch Basin is a key feature of the 10,000 Series FoodSafe Slot Drain. Constructed from T304 or T316 stainless steel, this basin offers exceptional resistance to corrosion, ensuring durability in even the most demanding environments. Unlike traditional square basins, the circular design eliminates corner edges, which significantly improves both cleaning efficiency and water flow. This streamlined, easy-to-clean design is particularly advantageous in industries where maintaining a hygienic environment is critical, such as meat processing, seafood packaging, and dairy production.

The 10,000 Series FoodSafe Slot Drain also features a slotted linear trench opening that facilitates efficient drainage while preventing clogging. Available in multiple slot sizes, including 1/2", 1", and 1 1/4", the system can accommodate different drainage needs and flow rates, making it ideal for handling high volumes of liquids. The drain's standard 0.5% slope ensures effective drainage by preventing water accumulation, which is essential for maintaining high sanitary standards in food and beverage facilities.

Furthermore, the drain system is designed to meet the demands of heavy-duty applications. It is rated for Load Class E (DIN EN 1433) and classified as Extra Heavy Duty (ASME 112.6.3), ensuring reliability under high loads. Its customizable lengths and configurations provide flexibility to meet various installation requirements, making it suitable for a wide range of facility layouts. To further enhance ease of maintenance, FoodSafe Drains offers a range of [accessories](#), including [cleaning paddle](#), [brushes](#) and [Flush Flo systems](#), ensuring thorough and efficient cleaning.

The versatility of the 10,000 Series FoodSafe Slot Drain with the Circular Catch Basin makes it suitable for a range of applications across the food and beverage industries. In bakeries, the drain provides hygienic solutions for production floors and washdown areas. In beverage production facilities, it ensures efficient drainage for bottling lines and production areas, preventing microbial growth. Breweries and wineries benefit from a drainage system capable of

handling high temperatures and chemical exposure in brewing and fermentation areas. Dairy production facilities can rely on the drain's hygienic design to prevent bacterial growth in milking parlors and processing areas. In meat processing and packaging, the system's robust construction ensures sanitation while handling heavy loads. The seafood processing industry benefits from its corrosion-resistant properties, ideal for saline environments in processing and packaging areas. Additionally, produce processing facilities can utilize the drain's sanitary design to prevent standing water and contamination in washing and processing areas.

As we continues to innovate with products like the [Circular Catch Basin](#), the company remains committed to delivering exceptional drainage solutions that meet the unique needs of its customers. With a focus on quality, hygiene, and efficiency, we are proud to support industries worldwide with reliable products that ensure optimal performance and safety.

### **FoodSafe Drains is a brand of Global Drain Technologies (GDT)**

Global Drain Technologies (GDT) is a leader in manufacturing drainage products and systems, providing innovative solutions tailored to industry-specific needs. Through GDT's FoodSafe Drains Division, GDT delivers specialized drainage solutions for the Food and Beverage sector. Additionally, GDT offers a comprehensive range of interior and exterior drainage solutions for both residential and commercial applications. As the inventor of the Slot Drain, GDT offers unparalleled expertise in integrated drainage solutions for both new construction and retrofit projects. GDT's approach emphasizes value-added design, manufacturing, and product delivery, ensuring that products are hygienic, easy to clean, and maintain. GDT is committed to providing industry-leading service, support, and engineering.
